

HOW TO DETERMINE MY SIZE

● SIZE CHART: MANHATTAN/BROOKLYN ●

Measurements must be taken wearing riding trousers and socks that you would normally use.
A flexible tape measure is recommended for the most precise results.

All our boots come in 11 sizes, from 35 to 45, according to standard european sizing, which corresponds with men's U.S. sizing from 3 to 11, and with women's sizes 5½ to 13½.

Follow Three Simple Steps

- Once you've determined your foot size, you can proceed to measuring your calf's circumference. take measurements while standing up, without shoes, and with straight legs slightly apart. having another person help you take your measurements would be ideal. While standing, measure the circumference of your calf at its widest point. Be sure that the tape measure remains horizontal without being too tight or too loose when wrapped around your calf. If your calves produce different measurements, use the larger measurement of the two.
- Measure the circumference of your knee just below the kneecap. This is where the boot's zipper ends, which is also the highest part of the boot. this point also corresponds to the back of the knee, where it bends.
- Lastly, measure for boot height from the floor to the crease at the back of your knee. Take this measurement barefooted or only wearing socks. This measurement should only be taken from the back and not from the front or sides. You must add 1 cm (3/8 inch) up to a maximum of 1.5 cm (5/8 inch) to the height measurement for the boots to naturally adapt to you.

i Note: when choosing a size, the sizing table does not account for the expansion of the elastic, which is approximately 1 cm/1.5 cm (3/8 inch, 5/8 inch)
